

Non-destructive test

[Versión en español](#)

Our non-destructive test services comply with regulatory standards for industrial sector inspections and provide data to analyze assemblies in service or as they are manufactured.

Non-destructive inspections and tests help determine damages and prevent future failures such as superficial or internal fissures in most ferrous materials and some non-ferrous materials. Our experience enables our team to perform non-destructive tests in pieces with irregular shapes, maintenance processes, finished pieces and machinery.

We offer a wide range of non-destructive tests such as:

- Visual inspections
- Liquid penetrants
- Industrial ultrasound
- Magnetic particles
- Fastener torque inspection
- Welding procedure specifications (WPS)

Our non-destructive test services are highly recommended for maintenance stages such as preventive, predictive and corrective in structures, ducts, assemblies in general and specialized toolings.

If you are interested in our services, do not hesitate to contact us at **services@gtechds.com** or **+52 (614) 394 1699**, we will be happy to assist you with all necessary advice for your projects.
